Background

When properly used a digital camera can add critical information to a telemedicine case. The Kodak EasyShare V1233 Digital Camera is simple to use and captures high quality images. Tips for taking better clinical images can be found on page two of this Handy Guide.

Taking Still Images

1. Turn the camera on by depressing the On/Off button (A) and select the AUTO camera mode (B).

2. Depress the Review Button (C) to check for images on the camera. Delete any existing images (see Deleting Images on page 2 of this Handy Guide).

3. Depress the review button (C) again to place the camera in picture taking mode.

4. Take a picture by depressing the shutter button (D) halfway down to set the autofocus (E). Depress the shutter button all the way down to take the picture.

   Remember: Take several pictures of the subject to insure you’ll have more than one good picture to choose from.

Using the Macro Function

- To use the Macro Function simply toggle the joy stick (F) down toward the macro symbol (G).
- The Macro Icon will appear in the viewfinder.
- Use the Macro function anytime your camera is closer than 22 inches to the subject.

Using the Flash Function

The Kodak Digital Camera automatically adjusts the flash. If you feel the flash is causing your subject to become washed out, you can manually turn the flash off:

1) Depress the flash button (H).
2) Continue to depress the flash button until the no flash icon appears in the LCD screen.

The flash is now off and will remain off until you select a new flash setting or turn the camera off and on.
Deleting Images

1. Select Review First
2. Then Select Delete
3. Use the Toggle to Select All
4. Use the Toggle to highlight "yes"
5. Depress the Toggle to select
6. The camera deletes all the stored images
7. All images have been deleted from the camera
8. Depress the Review button to return to picture taking mode
9. The camera is ready to take new images

Adding Images to a Telemedicine Case

If you are using tConsult Cart -
1. Turn the camera power off and place it in the docking station and depress the connect button (skinny silver bar on docking station).
2. Select the “Digital Camera” button from the “Add to Case” screen.
3. You will see images being loaded to your case viewer.
4. Select, label and save desired images to your case.
5. Delete images from the camera when done.

If you are using tConsult Web -
1) Connect the USB cable to your computer and the camera
2) Turn the camera power on
3) Select “Add an Image” from the “Add to Case” column
4) Browse to the Canon Camera folder on your computer
5) Select the image(s) you want to add to the case
